Any one have any ideas where I can download this from. I have googled but to honest not been successful. You can create your listing free at DIYnot Local. You are able to view or print any manual, user guide or form compiled in the collection, from within the programs main window, you are also able to open other pdf files on your computer from within the program. Ideal source of reference material for existing gas and oil heating engineers, an absolute must if you are just entering this profession either as a Corgi Registered installer or as a service engineer.

Installation manuals give information on the correct procedures of replacing components, servicing, commissioning, listing part numbers and fault finding guides. The listed pdf files are compiled into packaged pdfs by us, grouped into manufacturers categories and are viewed in alphabetical order by model. There are 2,450 pdf files listed covering models in excess of 3,500, some you are able to download from manufacturers site, but the majority you find here will not be available from these sources, some have been scanned in from the originals which were only available in that format. We have the largest and most comprehensive collection available anywhere and continue to add to our collection. Also included as part of the program are eleven forms photocopied blank and two technical guides which are part of our profession, on a separate menu. Condensing boiler exemption report form. Gas unsafe installation report form. Gas warning report form. Minor electrical works form for corgi gas installers. Power flushing checklist report form. Oil condensing boiler assessment report form. Oil firing installation completion report form. Benchmark booklet Government guide to condensing boiler assessment procedure report. CoGem technical guide on flue gas analyzer. Manuals is a software program, developed, compiled and distributed by ourselves for the windows environment, this will not run on any other system. The software remains our property you only purchase a licence to use the software. Manuals is a software program, which installs automatically once inserted into your dvd drive except win 7, you only need to follow the on screen instructions. The licence is for one computer only at a time, the software requires activation online and you will need to supply your details for support service. Not to be confused with dvds that only contain files. Manuals requires 4gb of free disk space. We supply an activation code on completion of purchase.

I have a Chaffateaux and Maury Britony Combi SE boiler which has broken down.according to the flashing lights on the front the problem is no flame detection. I called British Gas for a one off repair who recommended I spread the cost and take out a maintenance contract with them of course, I thought it would be easier on my wallet not having to pay them a lump sum so took them up on the offer.The engineer came to my house, said that the boiler wasnt on their Service list, that it could be a number of things that are wrong PCB Board, electrode or the leads that connect the two and that it would take two weeks to get the relevant parts meaning British Gas couldnt touch it and wouldnt be able to offer me a maintenance contract after all.he then left. I called a local guy but he told me I actually needed a new gas valve.that he would make some calls to try and find one and get back to me that day but never did.after chasing him 3 times over 3 days with no response I gave up.

<http://pedi-bc.com/images/commercial-manual-floor-sweeper.pdf>

Managed to find a PCB Board myself from a great local company but because theyre so highly recommended theyre very busy and cant actually fit it for 3 weeks!!!! Like everyone in this situation Im having a nightmare trying to sort this out and am hoping I can call someone up, tell them the problem, give them the part and all will be wellhopefully.Also, did this fix the problem. I have the same boiler and it comes up with the same error code 60. A local plumber tried what he said was a new board, though it looked pretty tatty in the box it came in, but I still had the intermittent fault. He then changed a pressure valve and eased me of 160 however I still have the intermittent fault. I can buy a new board but am not convinced it will fix the problem, but as my plumber didnt really have a clue I cant see the point in getting him back. I reckon I can change the board for the cost of a plumber coming back to not fix the problem. ML And guess what The damn thing has packed in

again only this time I can get hot water but no heating so the valve has stuck the opposite way this time, So looks like to try and locate another valve and spend another hour or so on my back replacing it. So if anyone is having a problem try both hot water and heating separately and if the flames go out on either one it stands a good chance it is the valve which is on the left behind the drop down plastic panel you will see a sensor on the front with 2 purple wires coming from it. The main control for the valve is at the back where there is a plug with 6 or 8 wires on it, but good luck coz its a pig to swap out. Any help appreciated. Any help appreciated. Both faults are common. Have you tried power cycling to see if the boiler will reset I downloaded an installation and user manual some months ago but cant see how to adjust the bath tap flow rate. I have worked out that is probably why the water temp. If I run the cold tap in the kitchen or anywhere else for that matter the bath tap water temp.

Thanks for any help. You should upgrade or use an alternative browser. Weve had an engineer out this week to service the boiler and diagnose the faults and hes come back with that it needs a new 3 way valve motor but nothing about the PCB. Would it be advisable to have the PCB replaced at the same time as the motor given the recurrent problem rather than pay out two sets of call out fees or could the stuck valve also cause the above error code in some way. If money were no object wed probably replace the boiler but that isnt really an option at the moment. Thanks in advance for any comments. Dave. I think the cost of the PCB itself is around 115120 pounds. Ive found the Operating Manual I think if its useful at all However, the company we used for the servicing has given quite a high quote for the PCB and slightly above the upper end of the price range weve found on line. Weve not been overly impressed with them so far mostly v. poor communication at every stage, and not very competitive so we will be getting some more quotes. However, in order to provide you with a quality service and security, some categories will charge a fee. These fees are clearly listed before you confirm your advert. Can you please advise Login to post Usually a latching condition and needs to be investigated rather than blindly reset. The Combi has a bit more intelligence. With the ignition locked out, you cant hifire the boiler, so no hot water of either type. The L should also show a code number check your user manual google for more guidance. Ive had a lockout on a noncombi it was caused by lack of circulation of central heating water through the boiler. The system boiled and the trip tripped. The pump WAS running, but wear in a valve actuator resulted in the valve feedback saying valve open while it was physically shut. The 2nd light is rednot flashing and the 3rd light is flashing green. The pilot light sometimes goes off too and. Hope this helpsIt keeps cutting out, error 60. How can i fix this please Have changed the dhw flow switch. Answer questions, earn points and help others. UserFriendly Manuals. Product Instructions. The Britony Combi. Here are some of the common problems most customers encounter with their Britony Combi SE 80 RJ Gas Heating Services can provide repair and installation services for all kinds of boilers

including the model Britony Combi SE 80. The Britony Combi is a fully automatic boiler. It is a low water content combination type, and requires wall mounted installation. It uses what is called a "fanned flue" system. A fanned flue is also known as balanced flues or closed flues. They are used with room sealed appliances. Its efficiency is rated at 76.6%. This non condensing combi boiler has a maximum power output of 23.25kw. It uses gas as its fuel source.

An extended warranty annually is available for purchase as well during the sale. However, it is important to note that the warranty will be voided if you or your engineer did not follow recommendations outlined by Chaffoteaux et Maury Ltd during installation, repair or service.
